508

Description of the task:

Combining different basic elements in groupwork:

1/ Take the logo of the Poly-Universe sets as a starting point. Examine the three basic elements. In what aspects are they similar, in what do they differ? First combine a few elements, then all the 24 elements of the triangle and the circle sets according to any rule. Strive to create as symmetric a shape as possible and use up all elements.

2/ Try to combine two other sets (triangle, square), (square, circle), and finally work with all the three different basic elements. Again, strive to create as symmetric a shape as possible and use up all elements.

Solution(s) of the task:

Remarks / Self-evaluation:
