Description of the problem / exercise: **7 Ring Super Galaxy**

In the first step, we match the basic elements of the circle to a star, and the 3 smaller shapes to the 3 planets orbiting it. The ring arrangement of the basic elements is called the Ring Galaxy of Poly-Universe, than the 7 Ring Super Galaxy if the total number of elements is used.

Then comes the game: A galactic black hole has stolen all the planets of the Poly-Universe Ring Galaxy. It's complete chaos!

Find and match by the color and size of the scattered planets before the 7 Ring Super Galaxy falls apart and scatters across the Universe!

- *Why this exercise is good:* Abstraction, association, combinatorics games.
- *Which level is recommended:* Primary school, high school, vocational school.
- *School subject(s):* Creative art, cosmology, computer science, combinatorics
- *Comments:* You can do it with paper elements, or with Google Draw, or any other dedicated app.
